

AHMED ASHRAF

AI Automation Engineer — LLM Agents, Workflow Automation & Integrations

Cairo, Egypt (Remote, UTC+2) · a7meda4raf12717@gmail.com · +20 115 529 1054

ahmedashraf-eg.github.io · linkedin.com/in/ahmed-ashraf-a5651041b · github.com/ahmedashraf-eg

SUMMARY

AI automation engineer who designs, ships and *operates* production LLM systems end to end — and is measured on what they do for the business. Rebuilt a dental practice's entire operation on a platform I built in three weeks and run its acquisition alongside it: **40–50 → 90–100 patients per week**. Built and operate an AI review-reply pipeline with **310+ human-approved replies** live across 7 restaurants and 13 locations, and webhook-driven CRM automation processing **3,000+ leads/day** (100,000+ total) with zero rep data entry. Human-in-the-loop by architecture; error paths, deduplication, audit trails and monitoring built in. 2+ years shipping production systems as sole engineer, with a sales floor behind it.

TECHNICAL SKILLS

AI / LLM Orchestration: Anthropic (Claude) API, AI agents & agentic workflows, Model Context Protocol (MCP), JSON-mode structured output, LLM intent classification with confidence-gated human escalation, prompt design, human-in-the-loop review gates

Workflow Automation: n8n, Make.com, custom Python (FastAPI) & Node.js automation services, webhooks (HMAC-verified, replay-resistant), background workers & scheduled jobs, Postgres-backed approval queues

Platform APIs: WhatsApp Cloud API, Google Business Profile, Meta Graph, Zoom Phone, Google Workspace (Sheets, Drive), Telegram, payment & ordering APIs

Data: PostgreSQL / Supabase, row-level security generated from a typed permission matrix, schema design, import normalization & fuzzy deduplication, append-only audit logs

Infrastructure & Delivery: Self-hosted Linux → VPS migrations, systemd, Cloudflare Tunnel (zero exposed ports) & Pages, Deno edge functions, AWS, Git / GitHub, CI gates with negative controls

Product Layer: React / Next.js, Astro, React Native (push notifications + deep links, magic-link / SSO auth), bilingual Arabic RTL interfaces

Growth: Paid ads, SEO, landing pages and conversion tracking — AI-assisted, measured on booked revenue

EXPERIENCE

Business Development & AI Consultant (Contract) — Bright Bite Dental Clinic

Feb 2026 – Present · Remote

- Grew the practice from **40–50 to 90–100 patients per week** (owner-verified) by rebuilding how it acquires, books and retains patients — paid ads, SEO, a bilingual booking site, and automated follow-up, all instrumented so spend is traceable to booked appointments.
- Built and shipped the clinic's entire operating platform in **three weeks — live, and still running the practice**: reception and clinical records, FDI tooth charting, treatment plans, billing, the public marketing and booking site, and patient self check-in.
- Automated patient communication on **n8n + WhatsApp Cloud API**: reminders at 24 and 3 hours respecting quiet hours and never sent twice; confirm/cancel buttons write straight to the diary. Free-text replies are **classified by an LLM and escalated to a human when confidence is low** — nothing medical is ever answered by a model.
- Put correctness in the database rather than the interface: **90 row-level-security policies across 35 tables generated from a single typed matrix**, append-only payments, signed clinical notes locked by trigger, gapless invoice numbering. A **19-step CI gate** (~332 tests, an 80-invariant financial suite, a 364-assertion replay across 30 simulated clinic days) with a negative control on every hardening step.

Co-Founder & Automation Lead — KROWDLY

Sep 2024 – Present · Remote

- Built and operate an AI review-reply pipeline — watcher → FastAPI webhook → LLM draft in the brand's voice → Postgres approval queue → one-tap mobile approval → auto-post to Google: **310+ human-approved replies** live across 7 restaurants / 13 locations, and a recurring chore reduced to a five-minute approval pass.
- Shipped the mobile approvals workflow gating every automated publish (React Native, push + deep links): owner turnaround dropped from **days of email to same-day taps**.
- Automate agency operations with Claude + MCP agentic workflows — content generation, plain-English reporting, review drafting — behind human review gates; **a full month of client content drafted in one working session**.
- Hardened for production: dedup on ingest, sensitive-review flagging, vendor-swap isolation (drafting provider replaced mid-build via a one-file change), silent backlog-import mode.

Full-Stack Developer (Contract) – High-Volume Sales CRM

Jan 2026 – Apr 2026 · Remote

Built under freelance contract for an external sales operation; since extended and deployed inside KROWDLY.

- Automated call logging end to end: Zoom Phone webhook events (HMAC-verified, timing-safe, replay-resistant) log each call against the right lead and advance its stage – **zero rep data entry**.
- Built the import pipeline handling **3,000+ leads/day (100,000+ processed)**: phone and city normalization with fuzzy business-name dedup; exact matches merge automatically, near-matches queue for human review.
- Delivered **sub-second lead-to-agent routing for 35 concurrent agents**, a background worker for scheduled jobs and callback reminders, 96 automated tests, and zero open ports in production.

Customer Acquisition Specialist, B2B Sales (AT&T) – Concentrix

Jul 2024 – Apr 2025 · Cairo

- Ran the full B2B cycle for AT&T business accounts – cold outbound prospecting through qualification, discovery meetings and close in Salesforce – then account-managed everything closed. **Exceeded targets by 30%**.
- The reason the CRM automation above exists: I did this job by hand first, so I built the system for how reps actually work rather than how a spec describes them.

Sales & Services Representative, ISM (AT&T) – Concentrix

Jun 2023 – Feb 2024 · Cairo

Held while completing my degree; left to focus full-time on my graduation project.

- Blended consumer sales, technical and billing desk, ~40 calls a day. **92% CSAT against an 80% target**; top salesperson three separate months.

SELECTED SYSTEMS

Bright Bite Dental Platform – clinicbrightbite.com · PostgreSQL with row-level security (48 migrations, 90 policies, 51 functions) · Supabase · 11 Deno edge functions · React 18 · Astro on Cloudflare Pages · n8n · WhatsApp Cloud API · LLM intent routing · offline write queue · full Arabic RTL mirror

AI Review-Reply Pipeline · Python / FastAPI · PostgreSQL (Supabase) · JSON-mode LLM drafting · Make.com (Google Business Profile read/publish) · Resend · Cloudflare Tunnel · systemd. Launched self-hosted, migrated to a VPS at scale.

CRM Automation Layer · Zoom Phone webhooks · import normalization and fuzzy dedup · scheduled workers · Supabase / PostgreSQL · append-only audit history enforced at the database level.

Agentic Operations Platform · Anthropic (Claude) API + MCP connectors automating multi-step business workflows, with reusable automation modules and human review gates.
