

AHMED ASHRAF

Full-Stack Developer — Web, Mobile & AI Integration

Cairo, Egypt (Remote, UTC+2) • a7meda4raf12717@gmail.com • +20 115 529 1054

SUMMARY

Full-stack developer who designs, builds, and ships production web and mobile applications end to end — React/Next.js frontends, React Native mobile apps, Node.js backends, PostgreSQL data layers, third-party integrations, and cloud deployment. Specializes in AI integration — building AI agents, agentic workflows, and LLM-powered features into real business products with the Anthropic (Claude) API and Model Context Protocol (MCP). Founder-operator with a track record of independently delivering complete, live products on tight timelines — from a cross-platform client app and a high-throughput sales CRM to AI-augmented operational systems. 2+ years shipping production applications.

TECHNICAL SKILLS

AI / LLM Integration: Anthropic (Claude) API, LLM application development, AI agents & agentic workflows, Model Context Protocol (MCP), AI-assisted development pipelines, human-in-the-loop systems

Frontend: React, Next.js, JavaScript, TypeScript, HTML5, CSS, responsive UI, component architecture, state management

Mobile: React Native (cross-platform iOS & Android), push notifications & deep linking, magic-link / SSO auth, role-based access, API-driven mobile apps

Backend: Node.js, REST API design, authentication & authorization, serverless functions, webhooks

Databases: PostgreSQL (Supabase), relational schema design, data modeling, query optimization

Integrations: Zoom Phone (telephony/VoIP), Meta Graph API (platform insights), Google Business Profile API, Google Workspace APIs (Sheets, Drive), payment & ordering APIs

Cloud & Delivery: AWS, cloud deployment, self-hosted Linux servers & VPS migrations (systemd, Cloudflare Tunnel), Git / GitHub, CI/CD fundamentals, end-to-end system design, rapid prototyping

EXPERIENCE

Founder & Full-Stack Developer — KROWDLY

Mar 2025 – Present

Remote · Cairo, Egypt

- Design and ship complete web and mobile applications end to end for restaurant, hospitality, and local-service businesses — online ordering, booking and reservation systems, marketing sites, and loyalty automation.
- Built the KROWDLY Client App end to end — a cross-platform (iOS & Android) React Native app in production with 7 restaurants across 13 locations (310+ approvals processed) — featuring real-time multi-location dashboards, a unified approvals workflow, push notifications, Google-reviews and Meta-insights integrations, in-app PDF reports, and an operator admin console.
- Own the full stack per project: React/Next.js frontends, Node.js APIs and back-end logic, PostgreSQL data layer, third-party integrations (payments, ordering, messaging), and cloud deployment.
- Deliver fully functional, live products on compressed timelines — typical build-to-launch under one week.
- Delivered 6 client web applications end to end, including 2 online-ordering systems for restaurants.

Full-Stack Developer (Contract) — High-Volume Sales CRM

Jan 2026 – Apr 2026

Remote

- Designed and built a custom CRM end to end for a sales operation running an opener/closer pipeline — supporting 35 concurrent agents and ~3,000 leads/day (100,000+ leads processed).
- Architected the data model and lead-routing pipeline on Supabase/PostgreSQL; integrated Zoom Phone for click-to-call and call logging, and the Google Sheets API as an operational data layer.
- Sole engineer across the full build — routing engine, agent dashboards, reporting, and all integrations — delivering sub-second lead-to-agent routing.

- Authored the complete technical specification and phased delivery plan, then implemented every phase to production.

Full-Stack / AI Developer (Independent)

Apr 2025 – Present

Remote

- Build AI-augmented operational systems and internal tooling — integrating LLM APIs and agentic workflows (MCP-based connectors) into real business processes with human-in-the-loop controls.
- Translate complex requirements into modular, deployable system designs and working implementations rather than prototypes.

SELECTED PROJECTS

KROWDLY Client App (iOS & Android) — React Native cross-platform app built end to end for restaurant owners to track and approve everything KROWDLY delivers — real-time multi-location dashboards (Meta insights), a unified approvals center (posts, Reels, offers, brand) with push notifications and deep links, a Google-reviews reply hub, in-app PDF performance reports, campaign timelines, and an operator admin console, with magic-link / SSO auth and role-based access. In production with 7 restaurants across 13 locations; 310+ approvals processed.

High-Volume CRM — Supabase/PostgreSQL, Zoom Phone, Google Sheets API. An opener/closer pipeline handling ~3,000 leads/day (100,000+ processed) for 35 agents, with sub-second routing, call logging, and reporting dashboards.

Restaurant Ordering & Booking Apps — React/Next.js + Node.js API + PostgreSQL. Live online ordering and reservations for hospitality clients, built and deployed end to end.

AI Agentic Operations Platform — Anthropic API + MCP connectors automating multi-step business workflows, with reusable skill/automation modules and human review gates.

EDUCATION

Cairo University — Faculty of Engineering

2024

Architecture & Engineering Technology (Credit Hour Program) — Cairo, Egypt
